

Volatile Substance Use Training (FREE)

Solvent Use* – gases, aerosols, nitrous oxide ('laughing gas'), poppers, petrol, solvents and other volatile substances.

Founded in 1984, Re-Solv is the charity working across Scotland to raise awareness of solvent use.

Training for gas and solvent use

Re-Solv delivers training on gas and solvent use to services and support groups across Scotland. With over 35 years of experience in this field, we offer training free thanks to funding from the Corra Foundation.

These sessions are aimed at anyone with an interest in updating their knowledge around gases and inhalants that are currently in use, but especially youth workers, addiction workers, housing support workers, recovery groups, teachers, parents and carers.

Session will cover:

- Understand what volatile substances are used today
- Know what products are used for inhalation
- Understand the broad dangers associated with gases and solvents
- A look at mortality rates and trends
- Take away key messages and harm reduction
- Understand Supply Side Legislation

*We use the term 'solvent abuse' on our website because this is the term that the public largely uses when searching for help and support around issues with gases and solvents. We want people who need support to be able to find it. We understand that the term 'abuse' is no longer used in most substance use settings. In our day to day support and training work we use the terminology 'gas and solvent use'. Please contact us if you would like further information.
